

What is claimed is:

1. An image scanning apparatus for scanning image data, comprising:
an image data scanning section: and
a display selecting section for displaying unitarily an item of additional
5 information to be added to image data taken by said image data scanning section
and a content corresponding to said item, and for selecting the displayed
additional information and updating the selected additional information.
2. The image scanning apparatus according to claim 1, further comprising a
10 sound recording section and a character inputting section,
wherein said additional information is composed of at least one of first
character data previously set, sound data recorded in said sound recording section
and second character data inputted in said character inputting section.
- 15 3. The image scanning apparatus according to claim 2, wherein the
additional information selected in the display selecting section or the additional
information selected and updated in the display selecting section is attached as a
header of the image data taken in the image scanning section and is recorded in a
recording medium as one file.
20
4. The image scanning apparatus according to claim 3, wherein said display
selecting section further includes a sound inputting-updating portion for updating
at least one portion of a composition of the selected additional information to the
sound data recorded in the sound recording section,
25 wherein the additional information selected and updated in the display
selecting section is attached as the header of the image data taken in the image
scanning section and is recorded in the recording medium as the one file.

5. The image scanning apparatus according to claim 3, wherein said display selecting section further includes a character inputting-updating portion for updating at least one portion of a composition of the selected additional
5 information to the second character data inputted in the character inputting section,

wherein the additional information selected and updated in the display selecting section is attached as the header of the image data captured in the image scanning section and is recorded in the recording medium as the one file.

10

6. The image scanning apparatus according to claim 3, wherein said display selecting section further includes a character inputting-updating portion for updating at least one portion of the first character data constituting the selected additional information to the second character data inputted in the character
15 inputting section,

wherein the additional information selected and updated in the display selecting section is attached as the header of the image data taken in the image scanning section and is recorded in the recording medium as the one file.

20 7. The image scanning apparatus according to claim 2, wherein said first character data is inputted from an outside area.

8. The image scanning apparatus according to claim 3, wherein said recording medium is attachable and detachable.
